

Portfolio Design System

Esrat Jahan · Foundations Week · AI Fluency Program

1. The One-Line Claim

Ten directions were generated and weighed against one test: would a recruiter remember it, and does it point at real, shipped work rather than a generic promise?

- I build full-stack products where AI quietly does the hard part.
- Full-stack developer turning healthcare and learning problems into working AI-powered apps.
- I design and ship AI-driven web products, end to end.
- Code that turns real problems — a hospital queue, a study session — into working software.
- Full-stack engineer building AI features people actually use, not just demo.
- I ship complete products: React Native apps, FastAPI backends, and the AI layer that ties them together.
- From dataset to diagnosis: I build AI-powered apps across health, education, and data.
- Full-stack developer focused on AI-driven products that solve real, specific problems.
- I build the whole stack — frontend, backend, and the AI in between.
- Turning ideas like AI symptom triage and auto-generated charts into shipped, working software.

Chosen & sharpened:

“Full-stack developer who ships AI-powered products — from an AI symptom-triage health app to a dataset-to-chart engine.”

Why this one: it names two real, finished proofs (HealthShebaAI, the NLP graph generator) instead of describing a skill in the abstract. A stranger reading it knows exactly what to click next.

2. Content Map

Every page ladders up to one action: get in touch about full-stack / internship opportunities. HealthShebaAI leads everywhere it's featured — it's the most complete case, with its own architecture, docs, and deck already built.

Home

Order	Section
1	Hero: name + one-line claim + primary CTA (typographic, no generated hero image)
2	Featured work strip — 3 cards: HealthShebaAI (lead), MindBurn, NLP Graph Generator
3	Skills/stack band: React Native, FastAPI, PostgreSQL, Redis, Firebase, LLM/SLM
4	About teaser (one line + link)
5	Footer CTA (repeats primary action)

Named CTA: View my work → Projects

Projects (index)

Order	Section
1	Intro line: what she builds and why
2	Case card 1: HealthShebaAI
3	Case card 2: MindBurn
4	Case card 3: Automatic Graph Generator from Dataset (NLP lab project)
5	Case card 4: Studentpod Buildathon 2026 (if ready by launch)

Named CTA: Read case study (per card)

Case Study — HealthShebaAI

Order	Section
1	Problem the app solves
2	Approach & architecture (React Native/Expo, FastAPI, PostgreSQL, Redis, Firebase, LLM/SLM triage)
3	Screens: hospital radar, medicine reminders, AI symptom triage, appointment booking
4	Outcome / current status
5	Next steps

Named CTA: See the code (repo link) / Watch demo

Still need to gather: Real device screenshots of all 4 modules; exported architecture diagram; a demo clip or GIF; repo URL.

Case Study — MindBurn

Order	Section
1	Problem the platform solves
2	Approach (React.js, FastAPI, PostgreSQL)
3	Screens: quiz flow, results/dashboard
4	Status

Named CTA: See the code (repo link)

Still need to gather: Real UI screenshots; repo URL.

Case Study — Automatic Graph Generator from Dataset

Order	Section
1	Problem: turning natural-language requests into charts
2	Approach: RAG + logistic-regression pipeline for chart-type classification (sentence-transformers, FAISS, BERT/MiniLM, TF-IDF baseline)
3	Sample outputs: a real prompt → a real generated chart
4	Status: wrapping up

Named CTA: See the code / Read the write-up

Still need to gather: Streamlit app screenshots; 2–3 real sample chart outputs; repo URL; lab report link if shareable.

About

Order	Section
1	Photo + short bio
2	Education: CSE, Jagannath University
3	Skills band
4	Interests: competitive programming, AI/ML research
5	Resume CTA

Named CTA: Download resume

Still need to gather: One real headshot photo; current resume PDF.

Contact

Order	Section
1	One-line invite
2	Email / contact method
3	Links: GitHub, LinkedIn
4	Footer CTA (repeats primary action)

Named CTA: Email me

3. Identity Kit

Type

Heading — Sora (Bold): confident, slightly technical, reads well at large sizes.

Body — Inter (Regular/Medium): the most legible free workhorse for long case-study text. Both are free on Google Fonts.

Palette

Main

#1E6F5C

Buttons, brand moments

Text

#14181B

Near-black body copy

Background

#FAFAF8

Near-white page bg

Accent

#2F80ED

Links only

Logo / Favicon

Two-letter monogram “EJ” set in Sora Bold, main teal (#1E6F5C) on a near-white (#FAFAF8) circle, no extra ornamentation. Doubles as the favicon at 32×32.

Style Note

Sora carries headings; Inter carries everything else. Teal (#1E6F5C) is reserved for buttons and brand moments; blue (#2F80ED) is reserved for links only, never decoration; near-black (#14181B) text on near-white (#FAFAF8) background. Mood: calm, capable, quietly technical — the frame should disappear and let the case studies carry the page.

4. Image Set & Curation

Images the portfolio actually needs

Where	Image	Source
Home hero	None — typographic hero over whitespace, one real screenshot (one of HealthShebaAI screen)	Rejection of HealthShebaAI
HealthShebaAI case	4 module screenshots (radar, reminders, triage, booking) + architectural diagram	Real captures / real development
MindBurn case	Quiz flow + results screenshots	Real captures
Graph Generator case	Streamlit UI + 2–3 sample chart outputs	Real captures / real outputs
About page	One headshot photo	Real photo
Stack band (site-wide)	Small line icons: React Native, FastAPI, PostgreSQL, Redis, Firebase	Generated once, one consistent icon style, reused

Rejection note

Generated an abstract gradient hero for the homepage — a glowing brain/network motif meant to signal “AI.” Rejected it: it had the generic, glassy AI-slop look, wasn’t tied to any real project, and would have out-competed the project cards for attention. A plain typographic hero with one real HealthShebaAI screenshot does more convincing than any generated image could, and it keeps the promise that the work — not the frame — is the loudest thing on the page.

Deliverable for: The Through-Line (content map + CTAs), Decide Once (identity kit), Kill Your Darlings (image curation) — FlyRank AI Fluency, Foundations.
